## INTRODUCTION

Science, engineering and technology have been an important force in manufacturing sustainability. It is essential to provide options and informing decisions that enables society to move towards more sustainable pathways. Thus, it is important to examine closely the ways in which manufacturing communities, social communities, processes and values shape the priorities of research and development. As well as the condition under which its potential benefits can be reaped. By integrating the broader perspective into the working principle of science, engineering and technology, it can helps these communities not only to generate new knowledge but also implementing robust solution to society most pressing sustainable development challenge.

Thus the theme "Empowering Science, Engineering and Technology towards Global Manufacturing Sustainability" will create great opportunities for researchers to instil their research towards sustainable manufacturing as well as technology.

## THEME:

# Empowering Science, Engineering and Technology Towards Global Manufacturing Sustainability

## WHO SHOULD ATTEND?

- Engineers and Industrial Practitioners
- Technical and Engineering Managers
- Academicians
- Researchers
- Consultants
- Postgraduate Students

## OBJECTIVES

To disseminate state-of-the-art information and knowledge of scientific findings in the area of science, engineering and technology

To initiate working network and to offer a suitable platform for knowledge sharing and exchange among local and international academicians, researchers, engineers and industrial practitioners who are actively involved in the field of science, engineering and technology

To serve as catalyst and inspiration for possible collaboration opportunities between academicians and their local / International industrial counterparts that will transform ideas and research findings into viable products.

## TOPICS

Including but not limited to:

Product Innovation  
Green Design & Sustainability  
Sustainable Materials in Design  
Composite Product Design  
Design For Environment & Sustainability  
Design For Manufacturing & Assembly  
CAD/CAM/CAE  
Reliability in Design  
Ergonomics in Design  
Concurrent Engineering  
Rapid Prototyping  
Reverse Engineering  
Design for Automation and Intelligent Systems  
Design for Mechatronics Systems  
Design for Manufacturing Systems  
Design for Education Engineering  
Ergonomics in Design  
Quality Engineering and Management  
Nanomaterials & Nanotechnology  
Biomedical & Life Science
