The mission of the GeoFood project is to utilise the scientific approach to establish the connection between geoheritage, geodiversity, ecosystem services, food production and sustainable development, in 26 areas around the world.

1 MC Gemilang Natural Water

LWI Blue's foundations lay on friendships formed over 30 years ago. Simon Wang, Jeffrey Tan, and SK Tan met at secondary school in Triang, Pahang and have remained close friends during their varied careers. When Simon, his father Datuk Wang, and renowned geologist Zainol Bin Husin discovered reserves of potable natural mineral water below the ancient Langkawi rainforests at the base of Gunung Raya they created the company MC Gemilang and set about harnessing this gift of Langkawi to share with Langkawi's residents and visitors.

5 Madu Kelulut (Stingless Bee Honey)

Kelulut Honey (madu in Malay) comes from a large tribe of bees called Meliponini, and are closely related to the common honey bee, carpenter bees and bumblebees. The key difference that sets these Kelulut bees apart, are their non-functioning stingers for defence (hence also commonly known as 'stingless bees'). The honey produced from these stingless bees are nutrient rich and extremely high in antibacterial resistance compared to normal honey. This is because the bees collect nectar from the deepest part of the flower, where it has a richer concentration of plant nutrients. Here in Langkawi, the abundance of flora for nectar sources means that there's a thriving stingless bee population that offers opportunity for harvesting Kelulut honey using sustainable beekeeping practices.
